

# JT's MANAGED WI-FI

provides more than just secure high speed  
CONNECTIVITY

JT Managed Wi-Fi is an advanced wireless network that helps to optimise your network productivity. Simple and reliable, it allows you to support a flexible and global workforce, provides secure access to, and, through increased visibility, facilitates the understanding of public behaviour and trends.

## Flexible management of government networks

We understand that the public sector needs optimal reliability and performance, together with centralised management from its network operations.

Whether you're looking to unify your network at department, city, council, national or international level, JT Managed WiFi solutions can consolidate all network switches, ports, applications, users and devices for ease of use and hassle-free flexibility.

## Secure, centrally managed

JT take care of quality control and security, troubleshooting and updates, alongside simplified administrative processes and operational efficiencies.

## We're ready to support you

Regardless of the public service you are accountable for, JT's Managed Wi-Fi can provide you with a service that both employees and public can use, safely and securely. Utilising our analytical tools, JT can provide optimised network-wide visibility, granular reporting, and user behaviour analytics, allowing you to learn about user activity. By understanding how people engage with your network, you can anticipate and accommodate their needs, remain relevant and competitive, and ultimately improve your service.

## RELIABILITY

### Performance

- Highest grade access points
  - Faster connections
  - Greater user capacity
  - Wider coverage
  - Fewer support calls
- High capacity wireless in dense, demanding environments
  - Dependable connections

### Security

- Enterprise-class security
- Fully compliant with data protection legislation
  - Data will be maintained in a secure environment
- Multiple secure SSIDs as needed (Corporate, Guest, etc)
  - Allocate specific Corporate and Guest networks
  - Safeguarding and segregate business information

### Did you know...

By 2020, 24 billion devices will be connected to the internet, with the vast majority using some form of wireless access.
