

PREVENT ATTACKS and secure YOUR BUSINESS

Denial of Service (DoS) and Distributed Denial of Service (DDoS) attacks can create big trouble for your communications network. By flooding it with fictitious additional requests, it completely disrupts operations so that your genuine, regular traffic either moves much more slowly, or even stops altogether. As a result, your network becomes less available, and can stay that way for a while.

Typical DDoS attacks target online businesses, financial institutions, online gambling companies and service providers, however a growing variety of industries are now reporting similar instances, so it pays to keep your network protected. They can cause lost revenue or increased network maintenance costs – and ultimately may even impact your business reputation.

Ongoing protection, which evolves as you do

JT's state of the art DDoS mitigation platform comprehensively protects your network against DoS and DDoS attacks. What's more, as new threats emerge and become even more strategic, our protection evolves with them, thanks to advanced threat intelligence.

JT's DDoS offers high level security and attack mitigation, available to customers both in the Channel Islands and the UK mainland, as well as peace of mind in JT as a trusted service provider.

- 'Always on service' mitigates volumetric network based DDoS attacks before they reach your premises
- Mitigate zero-day attacks, with constant protection from existing and new network threats
- Mitigate zero-day attacks, with constant protection from existing and new network threats
- Build traffic profiles in real-time
