

JT MANAGED WAN

providing seamless

CONNECTIVITY

and ultimate **SECURITY** for
government peace of mind

To remain competitive in today's market, with increasing public pressure, budget constraints and regulations, Government departments and public services businesses need reliable, secure and efficient communications. Dynamic networks, robust uptime and safeguarded access are essential to ultimately provide peace of mind to public and private stakeholders.

Ensuring seamless monitoring and connectivity, JT Managed WAN (Wide Area Network), allows cost effective, controlled and secure information sharing, enabling the delivery of reliable and consistent services.

Centralised and simplified, JT Managed WAN is a networking infrastructure connecting remote sites, allowing organisations to share highly sensitive data, voice or video traffic between multiple locations. JT Managed WAN can be provided over various delivery methods, so we can implement the right service for your needs. As an example, JT's MPLS can be integrated with the WAN, optimising resiliency, scalability, and flexibility to the centrally managed infrastructure.

Performance

- Quality of Service for functionality, agility and manageability
- Seamless monitoring and connectivity
- Guaranteed up-time, network performance and resilience

Cost Effective

- No need to invest in legacy infrastructure
- Reduces operational complexity
- Leveraging group procurement

Secure

- Provided via JT's Tier 1 core network
- Managed by JT's ISO/IEC 27001 certified Service Management Centre (SMC)

Qualified

- Our dedicated team of specialists hold industry approved qualifications in Cisco, ITIL, and more, to ensure the services we provide are efficiently delivered and aligned with the needs of your departments.
