

# JT Cyber Assessment

Powered by  centraleyes

## Product Description

We believe that reliable security can only be built on a combination of well-trained people and sound governance, underpinned by correctly configured technology, robust controls, and accurate reporting. Our cyber assessment will examine each of these areas to produce a comprehensive study of the whole company.

### Understand your security posture

With cyber threats ever evolving, and cyber criminals regularly ahead of the curve, organisations can't afford to sit back in hope that they do not become a victim. Regular security assessments against the changing threat landscape can help to highlight the gaps in your security that could be most vulnerable to attack.

**A typical JT Cyber Assessment is completed against the ISO27001 framework and supporting ISO27002 guidance and focusses on three key areas:**

- Understanding your organisation and the threats it faces
- Reviewing your current security policies and procedures against industry best practice
- Performing an in-depth analysis of your current cyber risk posture and mitigating security controls

### Align your business with industry best practice

Almost all businesses will be subject to scrutiny from customers, regulators, and shareholders to prove their security meets both internal requirements and that of specific industry standards.

#### Other available standards include:

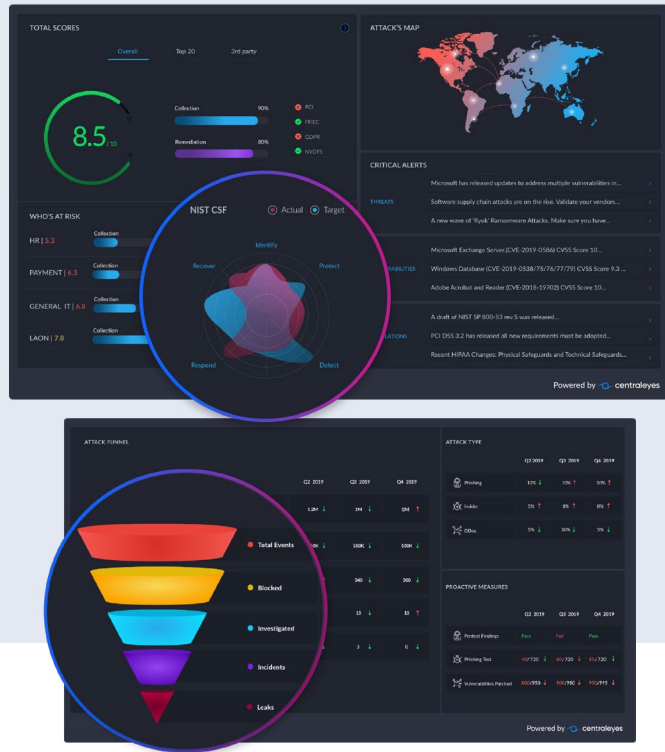

- NIST Cybersecurity Framework (CSF);
- CIS Critical Security Controls (CSC);
- GDPR;
- PCI DSS;

*Custom assessments can also be made available by request.*

Add the **1st Party Risk module** of the JT Centraleyes Compliance Platform\* to manage, monitor and report on compliance, reducing the need for bulky spreadsheets and providing a simple solution for overseeing your security program.

Include the **Board View module** to provide executive level reporting through an interactive dashboard. Upload your asset, project and incident data and combined with the compliance data from the 1st Party Risk module you can deliver meaningful data that is easy to understand in half the time.

## Why JT?

### Expertise

Our Cybersecurity consultants have a wide range of knowledge in areas including governance, risk and compliance practices, and supporting technical expertise.

### Flexibility

The Assessment is completed with minimal intrusion into the operation of your business and can be facilitated both onsite and remotely.

### Tracking

If selected you will be provided 24x7x365 access to the fully comprehensive Centraleyes compliance platform, in partnership with Centraleyes. Perfect for your business to collect, analyse and report on ongoing compliance to the standards you choose.

For more information on what the JT Centraleyes Compliance Platform can do for your business please view the **JT Cyber Compliance product description**, or contact the **JT Cybersecurity and Risk Advisory Unit** for a free demo.
